

Deployable Cyber Defense System (DCDS)

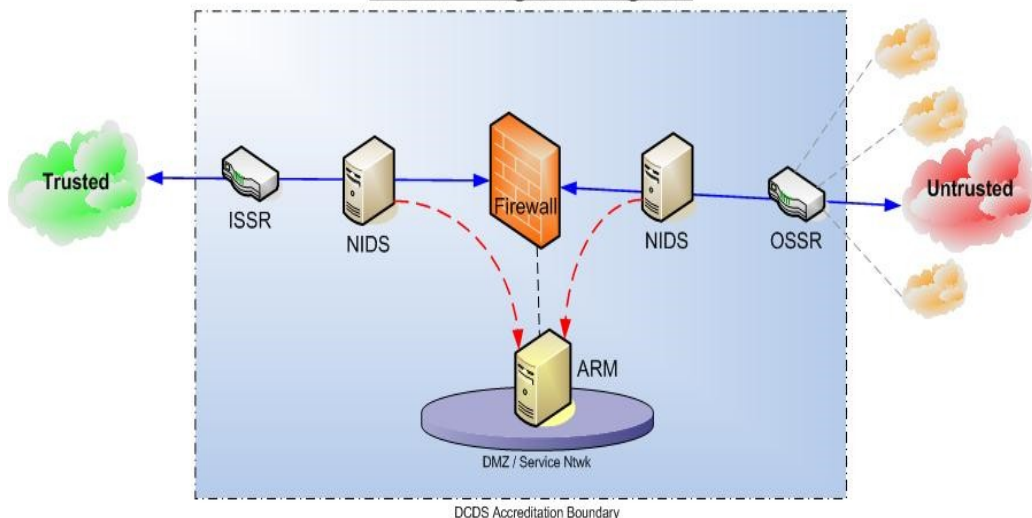

Are You Ready for Rapid, Secure Integration of Forward Mission Systems?

Sentar provides a highly portable self-contained intelligent cyber defense appliance for rapid setup and secure integration of inter-service, coalition, and community of interest networks.

Sentar's Deployable Cyber Defense System (DCDS) is the right solution for rapid setup of secure connections.

DCDS is self-contained, consisting of advanced policy-based cyber situation awareness and decision support, integrated state-of-the-art cyber perimeter protection, and symmetrically configured switches for network separation & segmentation.

DCDS – Logical Diagram

Intelligent Cyber Defense

- Multi-level situation awareness
- Correlation and policy-based decision support
- Integrated knowledge authority

Highlights

A Fully Transportable Cyber Control Solution

- Portable rack mount case · Standard 19" EIA rack width
- Shockmount, watertight, and lockable · Pull-out hard drives
- Single keyboard, video monitor and mouse

Secure boundary protection between trusted and untrusted networks

- Integrated firewall with programmable filter rules
- Network intrusion detection systems
- Multiple switches for TCP/IP routing and network separation

Rapid setup for secure integration of inter-service, coalition
